Applicant(s)

OGASAWARA ET AL.

Examiner

WEIPING ZHU

Art Unit

1793

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 May 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-946)
- 3) ☒ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date 4/7/2008.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-23 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Murphy (US 4,487,677).

With respect to claims 1, 6-8, 10, 12-14 and 17-20, Murphy ('677) discloses a method for producing Ti particles through reduction by Mg comprising (col. 2, line 31-41, col. 4, line 18 to col. 7, line 29 and col. 9, line 56 to col. 10, line 17):

electrolyzing a molten salt of magnesium chloride to produce magnesium, wherein the molten magnesium being a cathode;

chlorinating titanium ore with chlorine gas to produce titanium tetrachloride;

reacting magnesium with titanium tetrachloride in the molten salt to produce titanium sponge and replenish magnesium chloride;

separating the titanium particles from the molten salt; and

recycling the magnesium chloride generated in the reduction reaction of magnesium and titanium tetrachloride as a by-product by electrolyzing the magnesium chloride to produce magnesium and chlorine gas for the reduction reaction and chlorination steps respectively.

Murphy ('677) does not specify using Ca as a reducing agent. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute the magnesium chloride with calcium chloride to provide calcium as a reducing agent in the process of Murphy ('677) with an expected success, because magnesium sodium and calcium chlorides are functionally equivalent in terms of providing the reducing agents as disclosed by Murphy ('677) (col. 1, lines 11-17). See MPEP 2144.06.

With respect to claim 4, Murphy ('677) discloses that magnesium is on top of the molten salt (col. 10, lines 6-17).

With respect to claims 2, 5 and 21, see the reason for the rejection of the claimed limitation of using calcium as the reducing agent in the paragraph above.

With respect to claims 3 and 11, Murphy ('677) discloses that the titanium tetrachloride can be in the form of a gas or a liquid (i.e. molten salt as claimed) (col. 11, lines 39-46).

With respect to claims 9 and 16, Murphy ('677) does not specify the claimed features. However, the electrode configuration and the location where the molten salt of magnesium chloride formed during the reduction reaction is introduced as disclosed by Murphy ('677) (col. 9, line 56 to col. 11, line 3) reads on the claimed features.

With respect to claim 15, Murphy ('677) discloses that the temperature of the molten salt in the electrolyzing step (col. 5, lines 62-65) is lower than that in the reaction step (col. 13, lines 9-11).

With respect to claim 22, Murphy ('677) does not disclose the claimed feature. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to reduce other metallic chloride other than titanium tetrachloride in order to produce a titanium alloy as desired.

With respect to claim 23, Murphy ('677) does not specify the titanium particle size as claimed. However, it has been well held where the claimed and prior art products are identical or substantially identical in structure or composition, or are produced by identical or substantially identical processes, a prima facie case of either anticipation or obviousness has been established. In re Best, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977), MPEP 2112.01 [R-3] I. In the instant case, the claimed and Murphy ('677)'s titaniums are identical or substantially identical in composition and are produced by identical or substantially identical processes, therefore a prima facie case of obviousness exists. The same average particle size would be expected in the titanium of Murphy ('677) as in the claimed titanium.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-7 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-7 of copending Application No. 10/575,225. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 8-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 8-12, 15-18 and 20-23 of copending Application No. 10/575,225 in view of Murphy ('677). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims 8-12, 15-18 and 20-23 of the copending application disclose a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application. The claims 8-12, 15-18 and 20-23 of the copending application do not disclose the electrode configuration, the temperature difference between the molten salts in the electrolytic cell and in the reactor vessel and the particle size as claimed. Murphy ('677) is further applied to the claimed limitations in the instant claims 8, 9, 12, 15, 16 and 23 for the same reasons as stated in the paragraph 1 above.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1 and 11 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/589,879. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of the copending application discloses a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 2-10 and 12-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of the copending Application No. 10/589,879 in view of Murphy ('677).

Murphy ('677) is further applied to the claimed limitations in the instant claims 2-10 and 12-23 for the same reasons as stated in the paragraph 1 above.

5. Claims 1-3, 6-14 and 16-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6, 11 and 12 of copending Application No. 10/589,949. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of the copending application disclose a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 4, 5 and 15 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6, 11 and 12 of the copending Application No. 10/589,949 in view of Murphy ('677).

Murphy ('677) is further applied to the claimed limitations in the instant claims 4, 5 and 15 for the same reasons as stated in the paragraph 1 above.

6. Claims 1-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 and 9-12 of copending Application No. 10/590,863 in view of Murphy ('677). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims 1-6 and 9-12 of the copending application disclose a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application. The claims 1-6 and 9-12 of the copending application do not disclose the electrode configuration and the temperature difference between the molten salts in the electrolytic cell and in the reactor vessel as claimed. Murphy ('677) is further applied to the claimed limitations in the instant claims 8, 9, 12, 15 and 16 for the same reasons as stated in the paragraph 1 above.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

7. Claims 1-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 and 11-15 of copending Application No. 11/665,976 in view of Murphy ('677). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims

Art Unit: 1793

1-5 and 11-15 of the copending application disclose a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application. The claims 1-5 and 11-15 of the copending application do not disclose the electrode configuration and the temperature difference between the molten salts in the electrolytic cell and in the reactor vessel as claimed. Murphy ('677) is further applied to the claimed limitations in the instant claims 8, 9, 12, 15 and 16 for the same reasons as stated in the paragraph 1 above.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

8. Claims 1, 8, 11 and 12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 13 of copending Application No. 11/991,072 in view of Murphy ('677). Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 13 of the copending application discloses a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 2-7, 9, 10 and 13-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 13 of the copending Application No. 11/991,072 in view of Murphy ('677).

Murphy ('677) is further applied to the claimed limitations in the instant claims 2-7, 9, 10 and 13-23 for the same reasons as disclosed in the paragraph 1 above.

9. Claims 1 and 5, are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4 of copending Application No. 11/992,162 in view of Murphy ('677). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-4 of the copending application disclose a method for producing Ti or Ti alloy through a reduction by Ca, which is the same or obvious from the claimed method of the instant application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 2-4 and 6-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4 of the copending Application No. 11/992,162 in view of Murphy ('677).

Murphy ('677) is further applied to the claimed limitations in the instant claims 2-4 and 6-23 for the same reasons as disclosed in the paragraph 1 above.

Conclusion

10. This Office action is made non-final. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Weiping Zhu whose telephone number is 571-272-6725. The examiner can normally be reached on 8:30-16:30 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
